**Motion on “ Improving the imbalance in the utilization ratio
between public and private medical services”
to be moved by Hon Michael MAK Kwok-fung
at the Legislative Council meeting
on Wednesday, 19 June 2002**

Wording of the Motion

“That, as currently the serious imbalance in the utilization ratio between public and private medical services has drastically increased the workload for and pressure on the staff providing public medical services, this Council urges the Government to actively face up to the problem and expeditiously adopt the following improvement measures to prevent a decline in the quality of public medical services, including:

- (a) deploying resources appropriately and strengthening professional training, so as to assist the staff providing public medical services in coping with the service demand;
- (b) strengthening co-operation between public and private medical institutions, and encouraging private medical institutions to provide a higher level of services and enhance the transparency of their charges, so as to attract more people who can afford such charges to use private medical services; and
- (c) strengthening the co-ordination among relevant departments, so as to formulate long-term goals and strategies for vigorously pursuing the promotion of primary health education and disease prevention.”
