Subject Chris Watts from Lamma Island regarding the re-construction of Tamar

Dear Sir,

I am writing to you as a permanent Resident of Hong Kong and a very strong admirer of life here in this special territory.

I was thrilled to be at the Tamar site for the Harbour Fest and felt then that this place should be reserved for out door events with the fabulous backdrop of Hong Kong Island. Very modern and very dynamic.

We have to face up to the realities of over-development in this small and intense city. Already we have such huge pressure on our fragile environment from poor air quality. Building yet more Skyscrapers on our precious and dwindling harbour side will block views, clog roads and cause more green house gasses.

If we want the next generation to live in a toxic bubble we have to put together all the sophisticated knowledge and resources that we have to build a sensitive development which allows as much renewable energy and have the government set a very futuristic example to its citizens and the rest of the world showing that they really care about the air that we breathe and the water that we cannot swim safely in!!

I personally would like to see a huge green space for kids and families to safely play and walk around. I would like to have this site used for the betterment of the people of Hong Kong. User friendly!

Good luck with your plans, Chris Watts (CEO Stretch Ltd)
