

Customs Headquarters Building (CHB)

New/improved facilities – Radio Command Control Centre (RCCC)

- The radio facilities at the existing (43m²) RCCC at the Intelligence Bureau (情報科) are very primitive, and have been in use for over 20 years. A modern RCCC with upgraded facilities is required to enhance operational capability.
- There will be a total of 9 command consoles (控制台) in the new RCCC, in 2 levels of command (i.e. the daily operation level (日常行動層面) and the high command level (高層面指揮)).
- For the daily operation level, 8 command consoles will be used by the 8 investigation formations (調查科系) for individual daily use. During joint/large-scale operations, the high command level will be in operation (A total of 301 joint operations were held in 2005).
- The RCCC will provide the infrastructural support for a new generation of radio system with central command function and better encryption capability to support large scale/joint operations.
- The RCCC will also be used as a centralized command control centre (中央指揮控制中心) in case of emergency and contingency situations, such as contingency plan for internal security situation, response to terrorism, natural disasters, outbreak of avian influenza.
