**Hong Kong's Occupational Safety Performance in 2007**

**PURPOSE**

This paper briefs Members on Hong Kong's occupational safety performance in 2007.

**BACKGROUND**

2. The Labour Department (LD) is committed to safeguarding the safety and health of people at work by ensuring that risks in workplaces are properly managed and controlled through legislation, law enforcement, education, training and publicity. Through the concerted efforts of all parties concerned, including employers, employees, contractors, safety practitioners, the Occupational Safety and Health Council (OSHC) and the Government, over the past years, there has been a steady decline in both the number and the rate of occupational accidents.

**RECENT STATISTICS**

*Occupational Injuries*

3. The number of occupational injuries in all workplaces in 2007 stood at 43 979, representing a fall of 6.3% over 2006, while the injury rate per 1 000 employees dropped to 16.9, down by 8.3%. (**Table 1**)

**Table 1 : Occupational Injuries in All Workplaces**

	2002	2003	2004	2005	2006	2007 (Compared with 2006)
<b>Fatal cases</b>	210	171	187	187	187	172 (-8.0%)

<b>Total</b>	47 023	42 022	44 025	44 267	46 937	43 979 (-6.3%)
<b>Injury rate/ 1 000 employees</b>	19.2	17.7	18.1	17.8	18.4	16.9 (-8.3%)

4. There were improvements in all major economic sectors, including the construction industry, catering industry and the non-industrial sectors. A detailed breakdown of the occupational injuries in all workplaces in 2007 by major economic activities is at Annex 1.

***Industrial accidents***

5. The number of industrial accidents for all industrial sectors in 2007 stood at 16 117, representing a decrease of 6.8% over 2006. The accident rate per 1 000 workers also fell by 6.9% from 31.5 in 2006 to 29.3 in 2007. (**Table 2**)

**Table 2 : Industrial Accidents in All Sectors**

6. There were 25 industrial fatalities in 2007, representing a decrease of 3.8% over 2006. 19 of them occurred on construction sites, 3 in the manufacturing industry and 3 in the transport and related services, storage and other repairing services. Their causes were fall of person from height (10 cases), struck by falling object (4 cases), trapped in or between objects (3 cases), striking against or struck by moving object (2 cases), contact with electricity or electric discharge (2 cases), trapped by collapsing or overturning object (2 cases), struck by moving vehicle (1 case) and drowning (1 case).

### *Accidents in the Construction Industry*

7. The high-risk construction industry recorded 3 042 industrial accidents in 2007 with an accident rate at 60.6 per 1 000 workers, representing a drop of 10.5% and 5.8% respectively from 2006. The number of industrial fatalities was 19 cases, compared with 16 cases in 2006. (**Table 3**)

**Table 3 : Industrial Accidents in Construction Industry**

8. The causes of the 19 industrial fatalities which occurred on construction sites were fall of person from height (9 cases), struck by falling object (3 cases), trapped in or between objects (2 cases), trapped by collapsing or overturning object (2 cases), contact with electricity or electric discharge (1 case), struck by moving vehicle (1 case) and drowning (1 case). The most common types of construction accidents are injured whilst lifting and carrying (587 cases or 19.3%), striking against or struck by moving object (584 cases or 19.2%) and slip, trip or fall on the same level (507 cases or 16.7%). A detailed breakdown by type of accident is at **Annex 2**.

### *Accidents in the Catering Industry*

9. The catering industry continued to rank highest among all industries in terms of the number of accidents. Nonetheless, the number of accidents had decreased from 9 294 in 2006 to 8 876 in 2007, down by 4.5%, whilst the accident rate per 1 000 workers decreased from 47.2 to 43.5, down by 7.8% (**Table 4**). A detailed breakdown of the accidents in the catering industry by type of accident is at **Annex 3**.

### **THE WAY FORWARD**

10. LD will continue to focus our enforcement and promotional efforts on accident-prone industries and high-risk work activities, including the construction industry (particularly the renewal, maintenance, alteration and addition works, working at heights and the use of heavy equipment like tower cranes) and catering trade, etc. Working in close partnership with our stakeholders, we will also continue to put in our best efforts to cultivate a strong safety culture with a view to further enhancing occupational safety and health performance in Hong Kong.

## Notes:

- Occupational injuries (including industrial accidents) are injury cases arising from work accidents, resulting in death or incapacity for work of over three consecutive days, and reported under the Employees' Compensation Ordinance. Since 1.1.1998, Labour Department has used the date of occurrence of an injury as the basis for computing work injury statistics instead of the date of reporting in order to reflect more accurately the number of work injuries occurring in the year.
- Figures in brackets denote the number of fatalities.
- The above injury figures are recorded as at 31 March 2008.
- "n.a." means not applicable
