

**Comments on AOQ reviews – by James Fok**  
**(EnviroTech)**

**[AOQ & measurement objectives]**

- Agree to set up one because it's workable & practical.
- Request for a priority list and the exact execution plan, especially for the first three items.
- Data should be more indicative, with corresponding action suggested
- “Green point awarding system” vs “Building energy codes.”

**[Share the responsibility with the market]**

- Technology can help executing the plans, e.g. wall greening “立體綠化” vs roof greening (see reference images in the APPENDIX).
- Good chance to kick start “Green Economy / 綠色(循環)經濟” in Hong Kong
- Positive effect towards employment
- Certification system – standardize the qualification of environmental related business
- Taxation beneficiary – market will be welcome & more willing to support (e.g. Green Point Awarding system)
