Your fax no． 35292837

Clerk to the Panel on Financial Affairs
Legislative Council
Legislative Council Complex
1 Legislative Council Road
Central，Hong Kong
（Attn：Ms Angel Shek）

Dear Ms Shek，

## Panel on Financial Affairs <br> Follow－up to meeting on 3 June 2013

I refer to your letters of 6 and 7 June 2013 on the captioned to the Financial Secretary．The information on Asian merchandise exports performance and recent employment and business performance of the property－related sectors is enclosed in Annexes 1 and 2 respectively．

We would like to take this opportunity to thank Members for their interest in the subjects．

Yours sincerely，

（Andrew Au）
Government Economist（Acting）
Encls

## Performance of Asian merchandise exports

In the first quarter of 2013, Hong Kong's total merchandise exports in US dollar terms increased by $4.0 \%$ year-on-year, which compared favourably among the Asian economies. Over the same period, the corresponding figures for Singapore, South Korea and Taiwan were $-6.8 \%, 0.4 \%$ and $2.4 \%$ respectively (please see Table 1 for details).
2. Amid subdued import demand in the EU, US and Japan, Hong Kong's merchandise exports to these markets fell by $2.9 \%$ in US dollar terms over a year earlier in the first quarter of 2013, while those of Singapore, Korea, and Taiwan also fell by $17.6 \%, 7.4 \%$ and $2.1 \%$ respectively over the same period (please see Table 2 for details). This shows that other export-dependent Asian economies were likewise affected by the advanced economies, and Hong Kong was no exception.

## Recent employment and business performance of the property-related sectors

The recent employment and business performance of the property market-related sectors, viz. real estate, decoration, repair and maintenance for buildings, cleaning and similar services, and retailing of furniture and fixtures, are summarised in the following paragraphs.

## Employment situation

2. The employment situation in the property-related sectors generally improved over the past few years, with the unemployment rates showing noticeable decline amid a generally tight labour market with full employment. The situation largely continued on entering 2013. Specifically, unemployment rate in the real estate sector, including real estate development and leasing, brokerage, agency and maintenance management, hovered at a low of $2.3 \%$ in the first quarter of 2013 (please see Table 1 for details), slightly lower than $2.5 \%$ a year earlier. Unemployment rate for the cleaning and similar services sector also declined from $4.1 \%$ a year earlier to $2.2 \%$. The unemployment rate in the decoration, repair and maintenance for the buildings sector, which generally shows greater seasonal fluctuations from quarter to quarter, also improved, falling to $7.8 \%$ in the first quarter of 2013, from $9.5 \%$ a year earlier. Separate breakdown of unemployment rate in retail trade of furniture and fixtures is not available.

## Business receipts and output

3. The various property-related sectors showed mixed business performance in the first quarter of 2013. Specifically, business receipts of the real estate sector ${ }^{1}$ were $5 \%$ higher over a year earlier. On the other

[^0]hand, the gross value of construction works at locations other than construction sites ${ }^{2}$ edged down by $1 \%$. The volume of retail sales of furniture and fixtures ${ }^{3}$, which accounted for around $1 \%$ of the value of total retail sales, also fell slightly by $1 \%$ in the first quarter (please see Table 2 for details). Separate indicator for business receipts of cleaning and similar services is not available.

## Assessment

4. While the Government measures to curb housing market exuberance may have affected the various property-related sectors to different extents, the analysis above indicates that so far, the impact had been cushioned by a vibrant domestic sector and the overall tightness in the labour market. As a result, employment conditions in various property-related sectors had not shown any significant deterioration up till now, largely because sufficient job opportunities were available in many other sectors.
5. More importantly, the various property-related measures are deemed necessary to curb market exuberance for the sake of ensuring stable and healthy development of the property market. These measures would help protect Hong Kong's macroeconomic and financial stability, to the benefit of the economy in the long term. We would continue to monitor the situation closely, and would introduce appropriate measures when necessary.
