Subject: Objection to Kai Tak Monorail System

Dear All,

I would like to express my strong objection to the proposed monorail system at Kai Tak.

I do not understand why the monorail system is on the top of the consideration. It has been proved to be a failure system around many cities in the world, and it is a very old idea in terms of technology.

Please consider a more advance system and take the advantage of the current computation technology, like the Personal Rapid Transit (RPT). If you do not know what that is, please check out the following link:

http://en.wikipedia.org/wiki/Personal_rapid_transit

It has been used in Masdar City, UAE and Heathrow Airport.

In addition, I think the whole transport system should put a lot emphasis on bicycle rail. It is the most environmental friendly transport. For the scale of Kai Tak and in connection to East Kowloon, it should be a great way to wandering around in East kowloon on bike.

Hong Kong should look forward in the public transport system, not backward.

Regards,

Edmond Tse
