

Opinion

First: proprietary Chinese medicine registration, examination and development.

Proprietary Chinese medicine registration should be simple, don't like the western medicine is rigorous. Because most single concentrated powder and the efficacy of Chinese medicine yin pian is the same. The combination of traditional Chinese medicine (TCM) has thousands of one thousand prescriptions of safe use, the combination of a see will know that the safety of the efficacy of Chinese herbal formula. So made combined single concentrated powder in the capsules and pills of proprietary Chinese medicine prescriptions, will know that its reliability and security. About the detection of proprietary Chinese medicine capsules and pills made with single Chinese medicine concentrate powder, and the single Chinese medicine concentrate powder is already through content detection of heavy metals, bacteria, so no need to repeat test.

Second: The introduction of GMP (production quality management standard).

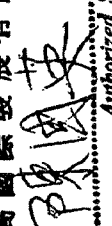

Traditional Chinese medicine (TCM) in the European and American countries don't look at traditional Chinese medicine (TCM) as a drug. GMP can sell to Europe and the United States? As for GMP need a lot of money and talent, is the survival and development can not be to the Hong Kong market. Haven't exercise of GMP and before, and we do as effective operation of proprietary Chinese medicine. GMP can later in Hong Kong as the case may be, but not now, want to development and security doesn't need to be GMP to do it. No GMP proprietary Chinese medicine is safe and effective.

Three: The current should be the focus of the work on how to increase the effectiveness up to more than eighty-five percent cure rate. Make out of proprietary Chinese medicine capsules and pills, premise must prove effective combination made of prescription, provide for the use of all the doctors cure, so it can improve TCM doctor cure rate, increase the traditional Chinese medicine efficacy.

TCM doctor level is uneven, they use their prescriptions to cure, some certain can cure, the second and third using the same agent, but sometimes forget a few herbs, curative effect is affected, some doctors still can't find the combined medicine cure a disease, constantly try to cure in patients, poor results curative effect can't cure disease. A case condition scour all medical books, formula how to cure is bad, this must depend on oneself have innovation theory set prescription to cure disease. I am experienced a n experienced person, some found after repeated thinking plus any reduction into effective combination prescription, and then made into capsules and pills for digital disease cure.

The mainland has been the implementation of GMP for many years, according to what I was most proprietary Chinese medicine curative effect is not good, the cure rate is low. Why is this? I think the medical haven't appeared. In fact, traditional Chinese medicine is the most need regulate human essence, by qi, blood, tianjin, wet and lymphatic unblocked to regulate balance. Function imbalance is sick, the balance is not sick. So there is the essence of nursing, the human condition what cannot be cured? I believe most of the disease, Chinese medicine made of proprietary Chinese medicine can cure most disease, better than western medicine can cure disease.

Now that implement GMP and proprietary Chinese medicine efficacy is improved, the cure rate is low, why do you want to practice now? As the proprietary Chinese medicine cure rate increased, the effective or a combination of the special prescription, let them show patients benefit mankind, then GMP is not late.
