RE: Refuse Collection and Resource Recovery

On the subject of refuse collection and recycling, Hong Kong as an economy with a \$12.3 billion USD expected budget surplus in 2016 and a per capita income that is even higher than the United States, yet is the number 1 waster in the world on a per capita annual basis is a complete embarrassment to all Hong Kongers.

The solution is education.

Last month I produced a video on this very subject. It is called **Shaping Change** and provides a full summary of my opinion on Education being the solution to the matter of Refuse Collection and Resource Recovery in Hong Kong.

The video can be found at <https://www.youtube.com/watch?v=jPVCdL6wmSs>

There is English audio and Chinese subtitles.
