Mrs Sharon Tong,
Clerk to the Panel on Manpower,
Legislative Council Secretariat,
3/F, Citibank Tower,
3 Garden Road, Central,
Hong Kong

Dear Mrs Tong,

LegCo Panel on Manpower
Manpower Supply on Construction Workers

At the LegCo Panel on Manpower meeting held on 22 April 1999, the Administration was requested to provide findings in respect of manpower supply of each trade in the construction industry based on the manpower survey conducted by the Vocational Training Council (VTC) when results were available.

This survey, which was conducted between March and May 1999, aims at collecting up-to-date manpower information of various sectors of the building and civil engineering industry (which includes construction sites, offices of major contractors, architects and consulting engineers and training institutions) and covers all principal jobs in the industry at different levels (ranging from professional/ technologist to technician, tradesman, semi-skilled/general worker). However, the survey does not include

decoration workers. When the last survey was carried out, arrangements were also made to collect manpower data on electrical and mechanical workers.

Based on the survey results, it is estimated that at the time of the survey (i.e. March 1999), there were 77,335 manual workers employed in construction sites. They comprised 68,684 construction workers and 8,651 E&M workers. Distribution by trades of these manual construction workers and E&M workers employed in construction sites is at Table 1 and 2 respectively — please see copies attached.

It should be noted that the above estimates only reflect the employment situation of manual construction workers and E&M workers in construction sites at the time of the survey in March 1999. The figures were not representative of the total labour supply in the industry since unemployed workers were not covered in the above VTC Manpower Survey.

Yours faithfully,

(P W Wong)
for Secretary for Education and Manpower
