

Supplementary information provided by the Administration regarding the environment friendly and/or energy conservation measures to be adopted in the two new Integrated Rehabilitation Services Centre under FCR(2007-08)55 and the estimated figures on the effectiveness of these measures in energy saving

The funding requested is for the fitting-out works of two existing buildings for the setting up of rehabilitation facilities. The budget for the proposed fitting-out works of each centre includes environmentally-friendly and energy conservation measures. The measures are those applicable to existing buildings and include low energy consumption lighting system, air conditioning system using environmentally-friendly refrigerants and paints composed of environmentally-friendly materials. The exact design of the fitting-out works, including these measures, has to be proposed by the operator of each centre and subject to compliance check by the Social Welfare Department in future. In this connection, the estimated figures on the effectiveness of these measures cannot be provided in this stage.
