# LEGISLATIVE COUNCIL PANEL ON DEVELOPMENT

### 270RS - Cycle tracks and associated facilities along seafront at Town Centre South, Tseung Kwan O

#### PURPOSE

This paper informs Members of the proposal to upgrade **270RS** "Cycle tracks and associated facilities along seafront at Town Centre South, Tseung Kwan O" to Category A at an estimated cost of \$107.1 million in moneyof-day (MOD) prices for the construction of cycle tracks, footpaths, landscaped open space and associated facilities along the seafront at Town Centre South, Tseung Kwan O (TKO).

#### PROJECT SCOPE AND NATURE

- 2. The scope of **270RS** comprises -
  - (a) construction of about 1.6 kilometres (km) each of cycle tracks and footpaths, and three cycle track underpasses at the crossing points with the footpaths;
  - (b) construction of an open space of about 8 metres (m) wide along the seafront with landscaping; and
  - (c) construction of ancillary works including a bicycle parking area, a toilet, a pet garden, and associated sewerage, drainage, waterworks, lighting and signage.

A layout plan showing the proposed works is at **Enclosure 1**. Subject to the funding approval by the Finance Committee, construction is expected to start in July 2011 for completion in July 2013.

#### JUSTIFICATION

3. We completed the "Further Development of Tseung Kwan O – Feasibility Study" (the Study) in December 2005. The Study recommended high quality medium-density commercial/residential developments in the undeveloped areas of Town Centre South and Tiu Keng Leng to accommodate a population of about 25 000, and a Civic Node with Government, Institution and Community facilities and various open spaces, including a landscape corridor and waterfront promenade. We are taking forward the proposals of the Study progressively. In June 2009, we obtained funding approval from the Finance Committee for the construction of part of the infrastructure works including cycle tracks and footpaths in Town Centre South. These works started in September 2009 and are anticipated to be completed in early 2012.

4. The Study also recommended the development of a vibrant seafront area with recreation and leisure activities at Town Centre South for public enjoyment. In fact, there has been increasing demand from the local residents for the provision of an integrated cycle track and footpath network, together with landscaped open space and ancillary facilities in Town Centre South. The proposed works in paragraph 2 above will not only provide the remaining part of the network, but will also facilitate direct and convenient access to the waterfront by the public.

5. A plan showing the cycle track and footpath network at TKO Town Centre South is at **Enclosure 2**.

## FINANCIAL IMPLICATIONS

6. We estimate the capital cost of the project to be \$107.1 million in MOD prices, broken down as follows -

....

		\$ million
(a)	Footpaths and cycle tracks, including bicycle parking area and underpasses	28.8
(b)	Landscaped open space, pet garden, lighting and signage	21.3
(c)	Waterworks	9.2
(d)	Drainage works	8.5

Page	3
------	---

(e)	Toilet and sewerage		8.9	
(f)	Environmental mitigation measures		1.2	
(g)	Consultants' fee for		1.0	
	(i) contract administration	0.7		
	(ii) management of resident site staff	0.3		
(h)	Remuneration of resident site staff		7.7	
(i)	Contingencies		8.7	
	Sub-total		95.3	(in September 2010 prices)
(j)	Provision for price adjustment		11.8	
	Total		107.1	(in MOD prices)

#### PUBLIC CONSULTATION

7. We consulted the District Facilities Management Committee of the Sai Kung District Council on 21 July 2009 and 22 September 2009 on the proposed works. Members supported the project and urged for its early implementation.

8. We gazetted the proposed works under the Roads (Works, Use and Compensation) Ordinance on 13 November 2009 and received one objection. The objector's main concern is that the proposed works might create undue constraints on the future development of water-related sports facilities along the seafront and leisure marine uses in the Eastern Channel and TKO. The objector also opined that the proposed cycle track underpasses will indirectly sever the seafront from the hinterland, and are also contrary to the planning of the pedestrian desire lines from the Mass Transit Railway TKO Station to the seafront.

9. We advised the objector that the proposed works are outside the sites designated for marine uses and will not impose constraints on the development of future water-related sports facilities. We also explained to the objector that while the cycle track underpasses are required to segregate pedestrians and cyclists for safety reasons, ample unrestricted and convenient

10. After considering the objection, the Chief Executive in Council authorised the proposed works without modification on 2 November 2010. The notice of authorization was gazetted on 19 November 2010.

# ENVIRONMENTAL IMPLICATIONS

11. The project is not a Designated Project under Schedule 2 of the Environmental Impact Assessment Ordinance. The project will not give rise to adverse environmental impact. Standard pollution control measures will be implemented during construction, as promulgated by the Director of Environmental Protection. The project only involves roadworks and landscaping works and the site is located in an undeveloped area. The impact arising from the construction works is considered environmentally acceptable when the standard pollution control measures are adopted.

12. The project will not cause any long term environmental impact. We will incorporate into the works contract mitigation measures to control potential pollution arising from the construction works to within established standards and guidelines. These measures include frequent watering of the site, provision of wheel-washing facilities to reduce emission of fugitive dust, use of silenced construction plant, provision of movable noise barriers and other procedures as recommended by the Director of Environmental Protection. We have included \$1.2 million (in September 2010 prices) in the project estimate for the implementation of environmental mitigation measures.

13. The project site is located within the 250 m consultation zone of the TKO stage I landfill. However, it is separated from the landfill by the 80 m wide Eastern Channel. No hazard will be induced during the construction and operation of the project. Protection measures will not be required.

14. We have considered the alignment and the design level of the proposed works so as to reduce the generation of construction waste where possible. In addition, we will require the contractor to reuse inert construction waste (e.g. excavated soil) on site or in other suitable construction sites as far as possible, in order to minimise the disposal of inert construction waste at public fill

reception facilities<sup>1</sup>. We will encourage the contractor to maximise the use of recycled or recyclable inert construction waste, as well as the use of non-timber formwork to further minimise the generation of construction waste.

15. We will also require the contractor to submit for approval a plan setting out the waste management measures, which will include appropriate mitigation means to avoid, reduce, reuse and recycle inert construction waste. We will ensure that the day-to-day operations on site comply with the approved plan. We will require the contractor to separate the inert portion from non-inert construction waste on site for disposal at appropriate facilities. We will control the disposal of inert construction waste and non-inert construction waste at public fill reception facilities and landfills respectively through a trip-ticket system.

16. We estimate that the proposed works will generate in total about 18 700 tonnes of construction waste. Of these, we will reuse about 5 100 tonnes (27%) of inert construction waste on site and deliver 12 570 tonnes (67%) of inert construction waste to public fill reception facilities for subsequent reuse. We will dispose of the remaining 1 030 tonnes (6%) of non-inert construction waste at landfills. The total cost for accommodating construction waste at public fill reception facilities and landfill sites is estimated to be \$468,100 for the proposed works (based on a unit cost of \$27 per tonne for disposal at public fill reception facilities and \$125 per tonne<sup>2</sup> at landfills).

## HERITAGE IMPLICATIONS

17. The proposed works will not affect any heritage site, i.e. all declared monuments, proposed monuments, graded historic sites/buildings, sites of archaeological interest and Government historic sites identified by the Antiquities and Monuments Office.

# LAND ACQUISITION

18. This project does not require any land acquisition and clearance.

<sup>&</sup>lt;sup>1</sup> Public fill reception facilities are specified in Schedule 4 of the Waste Disposal (Charges for Disposal of Construction Waste) Regulation. Disposal of inert construction waste in public fill reception facilities requires a license issued by the Director of Civil Engineering and Development.

<sup>&</sup>lt;sup>2</sup> This estimate has taken into account the cost for developing, operating and restoring the landfills after they are filled and the aftercare required. It does not include the land opportunity cost for existing landfill sites (which is estimated at \$90 per m<sup>3</sup>), nor the cost to provide new landfills (which is likely to be more expensive), when the existing ones are filled.

#### **BACKGROUND INFORMATION**

19. We upgraded **270RS** to Category B in December 2008. We engaged consultants to carry out site investigation and detailed design for the proposed works in 2009. We have charged the cost of about \$1.3 million to block allocation **Subhead 7100CX** "New towns and urban area works, studies and investigations for items in Category D of the Public Works Programme" for the site investigation and detailed design. We have completed the site investigation, detailed design and preparation of tender documents for the proposed works.

20. The proposed works will not involve any tree removal. We will incorporate planting as part of the project, including estimated quantity of 400 trees and 37 000 shrubs.

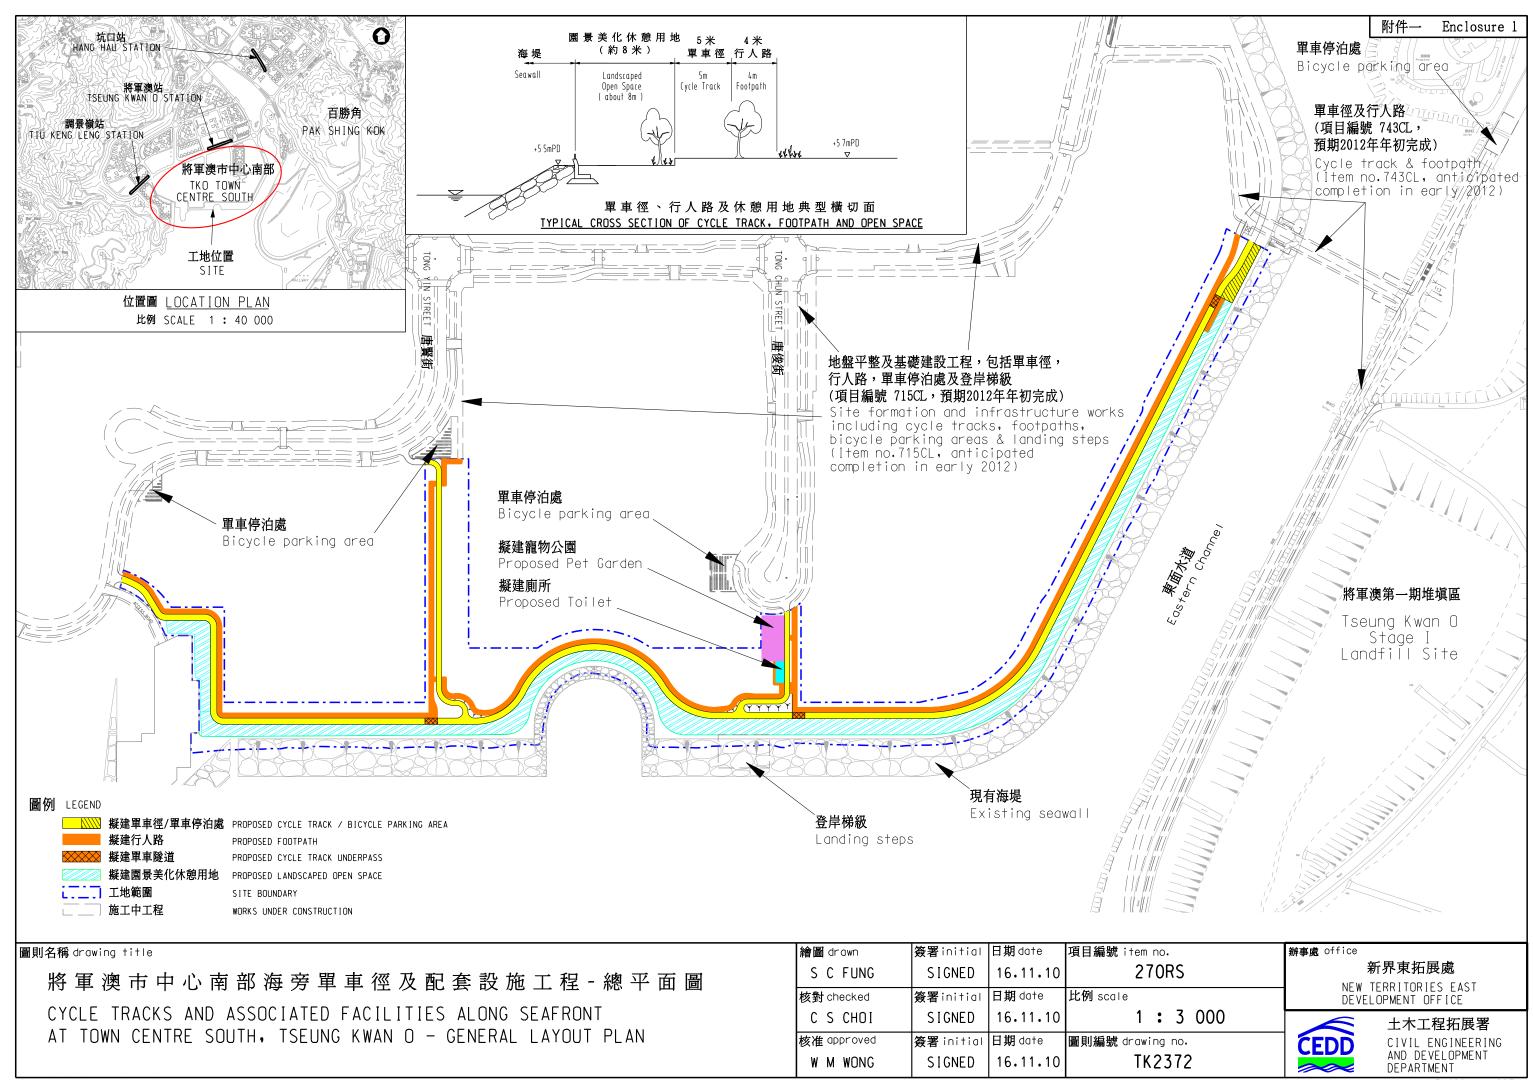

21. We estimate that the proposed works will create about 68 jobs (57 for labourers and another 11 for professional/technical staff) providing a total employment of 1 480 man-months.

#### WAY FORWARD

22. We intend to submit **270RS** for upgrading to Category A for consideration by the Public Works Subcommittee in January 2011, with a view to seeking funding approval from the Finance Committee in February 2011.
