LC Paper No. CB(1)544/12-13(04)

Ref: CB1/PL/TP

**Panel on Transport**  
**Meeting on 22 February 2013**

**Background brief on measures to improve the  
traffic distribution among the road harbour crossings**

**Purpose**

This paper provides background information on the three road harbour crossings ("RHCs"), namely, Cross Harbour Tunnel ("CHT"), Eastern Harbour Crossing ("EHC") and Western Harbour Crossing ("WHC"), and summarizes major views and concerns expressed by the Panel on Transport ("the Panel") on measures to improve the traffic distribution among the three RHCs.

**Background**

Mode of development and financing of RHCs

2. The Government has been following two major principles in adopting the Build-Operate-Transfer ("BOT") mode in constructing and operating tunnels<sup>1</sup>. The three RHCs were constructed at different times adopting BOT mode and their operations, including the toll adjustment mechanism, are governed by the relevant legislation. Initially awarded and operated as a BOT project, the ownership and control of CHT was transferred to the Government upon the expiry of the 30-year franchise in September 1999. The New Hong Kong Tunnel Company Limited was granted a 30-year franchise to operate EHC until August 2016. Whereas, the Western Harbour Tunnel Company Limited ("WHTCL") was granted a

---

<sup>1</sup> The following are the two major principles of the Government in adopting the BOT mode in constructing and operating tunnels:

- (a) The Government should encourage private participation and optimize the use of public resources, and, where feasible, adopt appropriate modes of public-private-partnership ("PPP") which include the BOT mode usually adopted in the past.
- (b) As the investor of a PPP project is required to make substantial upfront capital investment, they should be given the opportunity to make a reasonable return on their investment while bearing the commercial risk.

30-year franchise to operate WHC until August 2023.

Design daily capacity and average number of vehicles

3. The design daily capacity and average number of vehicles of the three RHCs are indicated in the following table. The current toll for private vehicles charged by the three RHCs is also highlighted for reference.

	EHC	CHT	WHC
Design daily capacity	78 500	78 000	118 000
Average daily vehicles in 2010	67 530	120 908	53 580
Average daily vehicles in 2011	69 520	120 545	56 950
Current toll for private vehicles	\$25	\$20	\$55

Uneven distribution of the three RHCs

4. The Government recognizes that the uneven traffic distribution among the three RHCs is undesirable and there is room for improvement to achieve traffic diversion and ease congestion at both ends of CHT. CHT has a clear natural advantage over the other two crossings given its central location and connectivity, which means shorter journeys, convenience and lower fuel costs for its users. This advantage is reinforced by the significantly lower toll that applies to CHT over the years. As a result, CHT is the most heavily utilized among all three RHCs, with an all-day throughput of about 120 000 vehicles that far exceeds the tunnel's design capacity. The Government has been exploring ways to optimize the utilization of RHCs.

Toll adjustment mechanisms

5. The toll adjustment mechanism in respect of WHC is stipulated in the WHC Ordinance (Cap. 436), under which the franchisee may effect toll increases on six specified dates (i.e., 1 January on 2001, 2005, 2009, 2013, 2017 and 2021) (known as "anticipated toll increases"), on the condition that the actual net revenue of the company in respect of a year ending

immediately before a specified date is less than the upper estimated net revenue for that year as stipulated in Schedule 5 to the WHC Ordinance. In addition, if in any year the actual net revenue of the company is less than the minimum estimated net revenue for that year as stipulated in Schedule 5 to the WHC Ordinance, the franchisee may advance an anticipated toll increase, and may implement an additional toll increase (known as "additional toll increase") if all the anticipated toll increases have been effected. Regardless of whether it is an anticipated toll increase or additional toll increase, the magnitude of each toll increase must not exceed that stipulated in Schedule 2 or Schedule 3 to the WHC Ordinance for various categories of vehicles. Tolls adjusted according to the mechanism stipulated in the WHC Ordinance are called "statutory tolls", which do not require the Administration's approval.

6. The last statutory toll increase of WHC took effect on 31 July 2012. The franchisee has been offering concessions to all categories of vehicles so that actual tolls (or "concessionary tolls") are lower than the statutory toll levels. The revised concessionary tolls of the tunnel took effect on 1 January 2013.

7. The toll adjustment for EHC is somewhat different. The EHC Ordinance (Cap. 215) provides that the tolls specified in the Schedule to the EHC Ordinance may be varied by agreement between the Chief Executive in Council and the tunnel company. If an agreement cannot be reached, either party may submit the question of the variation of tolls to arbitration. The EHC Ordinance has not set out the criteria for determining toll adjustments. It only stipulates that if the matter is submitted for arbitration, the arbitrators shall be guided by the need to ensure that the carrying out by the tunnel company of its obligations, or the exercise of its rights, under the EHC Ordinance is reasonably but not excessively remunerative to the tunnel company, having regard to, inter alia, any material change in the economic conditions of Hong Kong since the enactment of the EHC Ordinance or since tolls were last determined. The EHC franchisee had pursued arbitrations in 1996, 2003 and 2011 after the Government had rejected its applications for toll increase. The tolls of EHC were last raised in 2005.

8. The governing legislation of CHT is the Road Tunnels (Government) Ordinance (Cap. 368). The tolls for CHT are specified in Schedule 2 to the Road Tunnels (Government) Regulations (Chapter 368A).

The last toll adjustment of CHT was made in 1999.

Consultancy studies conducted in the past

*Mainland experience*

9. The Administration completed in 2003 a consultancy study on the Mainland and overseas experience in the provision and operation of tunnels. The study showed that the arrangement adopted in four Mainland cities covered in the study (i.e. Shanghai, Guangzhou, Wuhan and Chongqing) was similar to an earlier suggestion made by Members of the Legislative Council ("LegCo") that a Tunnels and Bridges Authority ("TBA") be established in Hong Kong. The TBA was expected to own and operate all tunnels and bridges. To achieve this, the Government would have to buy back the ownership of all BOT tunnels. The Administration's view in 2003 was that such a move would involve enormous capital spending. Given the budget constraint and the need to contain government expenditure, the option was not further pursued by the Administration.

*Consultancy study on rationalizing the utilization of RHCs*

10. The Administration informed the Panel in November 2008 that the Government had commissioned a consultancy study on rationalizing the utilization of RHCs ("the Consultancy Study") with an objective of identifying the optimum level of traffic for the three RHCs, taking into account their geographic locations and the capacity of connecting road networks, and recommending feasible options that covered the necessary financial, organizational and legal mechanisms to achieve the optimum traffic result. The Panel discussed the findings of the Consultancy Study on 9 November 2010, and conducted a further meeting on 11 January 2011 to receive public views. The executive summary of the final report of the Consultancy Study is in the Appendix of the Administration's paper [LC Paper No. CB(1)298/10-11(01)]. In brief, the consultants recommended the following measures in the report –

(i) Short to Intermediate Term (2010 – 2013)

- Discuss with the franchisees the implementation option to increase CHT tolls and provide toll rebate to EHC and/or WHC users, i.e. the rebate option.

- Conduct a trial run on the rebate option to test the travel behaviour of RHC users adopting any of the better toll scenarios.

(ii) Intermediate Term (2013 – 2017)

- Continue with Short to Medium Term solution, i.e. the rebate option adopting the better toll scenario that has been tested and produces desirable traffic impact.
- Towards the end of EHC franchise in August 2016, negotiate with WHTCL regarding the implementation of the concession option. At that time, the Government will have a stronger hand in the negotiations with WHTCL. Additionally, the Central-Wanchai Bypass ("CWB") will open to traffic in 2017 whereupon more traffic can be diverted from the CHT to WHC without causing unacceptable traffic problems on the connecting road network, especially along the Connaught Road Central corridor.

(iii) Long Term (2018 – 2023)

- Implement the package of concession or rebate options and implement desirable toll scenario if successfully negotiated with WHTCL.
- Failing that, consider the implementation options of extension of franchise or buy-back.

(iv) Long Term – after 2023

- Implement any of the better toll scenarios, as control of all three RHCs will have been reverted to the Government by that time.

11. The Administration advised that it maintained an open mind on all the consultants' various recommendations for achieving better distribution of cross-harbour traffic, and would carefully consider views from the public and relevant stakeholders including LegCo Members, the Transport

Advisory Committee ("TAC"), the transport trade, road users, and members of the public on the contents and recommendations of the Consultancy Report. For this purpose, the Administration consulted TAC, and conducted a three-month public consultation exercise starting from 9 November 2010 onwards.

12. The Chief Executive announced in his Policy Address on 16 January 2013 that following public consultation and consultancy studies, the Government has worked out feasible proposals to alleviate congestion at the harbour crossings. The broad direction is to increase the toll fees for CHT and reduce those for EHC through government subsidy, so as to divert traffic and ease congestion.

### **Discussions by the Panel in the Fourth LegCo**

13. There have been plenty of discussions by members on measures to improve the traffic distribution among the three RHCs since 2000.

14. At the meeting on 28 November 2008, some members considered that the failure to subject the toll adjustments of WHC and EHC to the approval of LegCo was the main cause of uneven traffic distribution among the three RHCs. They called upon the Administration to refrain from adopting the BOT mode to deliver roads and tunnels in future. Some other members, however, considered that the Administration should make reference to overseas experience of successful implementation of the BOT mode. Some members suggested that the Administration should examine the feasibility of establishing a TBA to own and manage all tunnels and bridges, including the BOT tunnels.

15. Members expressed comments on individual recommendations of the Consultancy Study mentioned in paragraph 10 at the meetings held on 9 November 2010 and 11 January 2011. They are summarized below:

(a) Adjusting the tolls of CHT and EHC

- Toll scenario of increasing the CHT toll and requesting the EHC franchisee to provide a corresponding reduction in EHC toll ("the CHT/EHC proposal") was undesirable because it would mean penalizing users of

CHT. The increase in fuel cost arising from the need to travel longer distance to benefit from the reduced EHC toll would also affect the operating cost of commercial vehicles and hence the prices of goods and services.

- The CHT/EHC proposal might not be effective because there was congestion in the connecting road(s) of each of the RHCs. Drivers might, instead of switching to EHC, continue to use CHT.
- It was doubtful whether EHC could be able to absorb additional patronage, considering that the Island Eastern Corridor was at present already congested during peak hours. The implementation of the CHT/EHC proposal to divert traffic from CHT to EHC might aggravate congestion of Gloucester Road on Hong Kong Island.
- Any move to increase CHT tolls might lead to increase in public transport fares and hence would meet with strong opposition unless fully justified.
- People should be encouraged to use EHC by reducing EHC tolls only and not increasing CHT tolls at the same time.
- The tolls for private cars at EHC and CHT should be aligned, while EHC's and WHC's tolls for commercial vehicles should remain unchanged.

(b) The rebate option<sup>2</sup> (increasing CHT tolls and providing rebate to EHC and/or WHC users)

- If the rebate option was only pursued with EHC, the

---

<sup>2</sup> Under the rebate option, the Government may consider increasing the CHT toll and provide a corresponding rebate in the EHC/WHC toll to EHC/WHC users, and implementing the rebate through the EHC/WHC franchisee. The rebate will be provided to EHC/WHC users direct, and the Government will reimburse the EHC/WHC franchisee the rebate provided to EHC/WHC users on basis of actual traffic flow. Agreement of the EHC/WHC franchisee on not to adjust its tolls during the rebate period will be required.

likely result might be that EHC was the only party to benefit because CHT's congestion would unlikely improve considering the difficulty in diverting its traffic eastwards given the congestion in the eastern part of both Kowloon and Hong Kong during peak hours.

- With the commissioning of Route 8, vehicles using WHC to go to New Territories East and West had increased significantly. As such, the rebate option should also apply to WHC.

(c) The adoption of a resource management based principle<sup>3</sup> (larger vehicles are subject to higher tolls)

- Instead of requiring commercial vehicles to bear higher costs for crossing the harbour as proposed in the Consultancy Report, it might be fairer and more effective to increase the tolls for private cars and decrease the tolls for other vehicle types. This was because while toll increase for private cars was acceptable for the purpose of encouraging use of public transport, toll increase for commercial vehicles might give rise to operational difficulties.
- All proposals put forward in the Consultancy Report involved toll increase for heavy vehicles. The Administration should properly consult the logistics trade. Even if the toll for heavy vehicles at EHC was reduced, out of fuel cost consideration, heavy vehicles might still not be willing to travel longer distance to use EHC.

---

<sup>3</sup> According to resource management principle, larger vehicles should pay more than smaller vehicles as they occupy more road space and cause more wear and tear on road surface. Under the current toll structure of CHT, tolls payable by larger vehicles in using CHT is only marginally higher than that by smaller vehicles. Tolls of EHC and WHC are set with more regard to the resource management principle. Adjusting the toll structure of CHT closer to the resource management principle would mean larger toll increase for larger vehicles than smaller vehicles.

(d) Members' alternative proposals and other views

- It is necessary to ascertain the cost-effectiveness of the measures before actually taking forward any toll scenarios, for example, by conducting a trial scheme for this purpose.
- Some members considered that in the long run, the Administration should buy back EHC and WHC; whereas some members did not consider it advisable to spend a substantial sum to buy back EHC at this stage.
- Since WHC still had spare capacity during non-peak hours, Government subsidy should be provided to WHC instead of EHC to facilitate downward adjustment of WHC tolls to attract more vehicles to use it. Alternatively, WHC should be urged to provide toll concessions for various means of public transport and other commercial vehicles during non-peak hours.
- More active efforts should instead be made to facilitate the traffic flow of WHC pending the completion of the CWB, for example, by imposing different tolls for vehicles using WHC from different directions.
- Pending completion of the likely protracted negotiation on the buy-back option, construction of the fourth RHC or a cross-harbour bridge should be examined.
- It is necessary to map out measures to reduce the number of vehicles using the three RHCs during peak hours, for example, by providing park and ride spaces at major malls and public rental housing estates all over Hong Kong to encourage more people to use mass public transport services.
- The Administration may consider reviving ferry service to help improve cross-harbour traffic.

## **Relevant motion/questions moved/raised at Council meetings**

16. In the Fourth LegCo, a motion was passed at the Council meeting on 19 November 2008 on "Concern about the cross harbour tunnels failing to divert traffic flows effectively and their high tolls". The wording of the motion is in **Appendix I**.

17. In the fourth LegCo, Members raised five questions relating to measures to improve the traffic distribution among the three RHCs at the Council meetings of 12 November 2008, 3 March 2010, 6 April 2011, 4 May 2011 and 29 June 2011. The hyperlinks to relevant papers and questions are given in **Appendix II**.

## **Latest developments**

18. On 8 February 2013, the Administration launched a public consultation exercise to invite views on the proposed measures to improve traffic distribution among RHCs up to 7 May 2013. According to the Administration, it will commence discussion with the EHC franchisee on the implementation of the most preferred toll adjustment option depending on the outcome of the public consultation. The Administration expects to conduct a 12-month trial in the second half of 2014 at the earliest and will review the outcome of the trial before deciding whether the toll adjustments should continue.

19. The Administration will consult the Panel on the above matter at the meeting to be held on 22 February 2013.

Council Business Division 1  
Legislative Council Secretariat  
19 February 2013

(Translation)

**Motion on**  
**“Concern about the cross harbour tunnels failing  
to divert traffic flows effectively and their high tolls”**  
**moved by Hon CHAN Hak-kan**  
**at the Legislative Council meeting**  
**of Wednesday, 19 November 2008**

**Motion as amended by Hon Andrew CHENG Kar-foo**

That, as presently the Eastern Harbour Crossing ('EHC') and Western Harbour Crossing ('WHC') have failed to achieve the function of diverting cross-harbour traffic flows effectively, and their tolls are on the high side, imposing a heavy burden on vehicle owners and the general public, this Council urges the Government to:

- (a) discuss with the management of EHC and WHC for the provision of more toll concessions, such as offering lower tolls during non-peak hours and half tolls for commercial vehicles which do not carry passengers or goods;
- (b) actively discuss with the two tunnel companies and various bus companies to make more room for reduction in cross-harbour bus fares through the offer of toll concessions by the two tunnel companies to the bus companies, thereby bringing down cross-harbour bus fares;
- (c) lower the tolls of EHC and WHC to reasonable levels by way of buying out, 'offering shares in exchange for the tunnel ownership' or extending the franchises of these two tunnels; and
- (d) improve the connecting road networks for EHC and WHC, including expeditiously constructing the Central-Wan Chai Bypass,

so as to attract more vehicle owners and members of the public to use EHC and WHC, and improve the current traffic congestion at the Cross Harbour Tunnel in Hung Hom, with a view to achieving the objectives of reasonable distribution of traffic among the three tunnels, improving air pollution and alleviating the burden of travelling expenses on vehicle owners and the general public.
