Letter on Supporting the Development of an
Electronic Health Record Sharing System (eHRSS)

Dear Sirs,

In the past few years, our hospital has engaged and benefited from the Public-Private Partnership programs like PPI-ePR (Public Private Interface electronic Patient Record) project. We envisaged that the future development of territory-wide electronic health record sharing system will benefit the patient care, achieve greater efficiency and yield associated cost savings for the overall healthcare process in Hong Kong.

In view of the benefits that can be brought forth by eHRSS, St. Teresa's Hospital has embarked in enhancing our services including our IT systems and infrastructure so as to embrace this new change. To be successful and well received by the Hong Kong citizen, the system should be able to entertain our daily workflow challenges without causing any inconvenience to our patients and hospital staff and at the same time addressing patient data privacy needs.

As one of the healthcare providers in private sector, we would therefore hope that the Bill receives the support of the Legislative Council for the benefit of all Hong Kong people.

Yours sincerely,

C.M. Wong

Medical Superintendent
