Ms Alice LEUNG  
Clerk to Subcommittee on Food and Drugs  
(Composition and Labelling) (Amendment) (No. 2) Regulation  
Legislative Council Complex  
1 Legislative Council Road  
Central, Hong Kong  
(Fax: 2509 9055)

Dear Ms Leung,

**Food and Drugs (Composition and Labelling) (Amendment) (No. 2) Regulation**

I refer to your letter of 16 October. Regarding the questions raised by the Subcommittee at its meeting on 14 October, our response is as follows:

Question (1)

2. In 2012, the Centre for Food Safety (CFS) conducted a survey on the nutrient content (including iodine content) of 64 infant formula products. Details of the formula products and findings of the survey are set out in Annexes 1 and 2.

Question (2)

3. Apart from the findings of the surveys in 2012 and 2013, we have no latest surveillance information about the nutrient content of infant formula and follow-up formula in the market. However, we would like to emphasise that the proposal of a shorter grace period of 18 months for infant formula aims to ensure as soon as practicable compliance of the infant formula in the market with international requirements on composition and labelling for the healthy growth of infants. This is because where breastfeeding is not feasible, infant formula is the only processed foodstuff which wholly fulfils the nutritional requirements of infants during the first months of life until the introduction of appropriate complementary feeding<sup>1</sup>.

<sup>1</sup> Complementary feeding is normally introduced at 6 months of age.

Question (3)

4. Regulation 5(4) of the Food and Drugs (Composition and Labelling) Regulations (Cap.132 sub. leg. W) provides that “in any proceedings for an offence against paragraph (1B), it shall be a defence for the defendant to prove that each alteration, removal or obliteration in respect of which the offence is alleged was effected under the written authorization of a person capable of effecting that alteration, removal or obliteration without contravention of that provision”.

5. Therefore, it shall be a defence to an offence under regulation 5(1B) for a person to prove that he or she has, with the written authorization of the manufacturer or packer originally responsible for marking or labelling the food for the purposes of regulation 4, 4A, 4B or 4C, altered, removed or obliterated the marking or labelling in question.

Question (4)

6. Penalties for contravening the statutory requirements on food labelling and other statutory requirements in respect of food safety are detailed at Annex 3.

Question (5)

7. According to the Water Supplies Department, the fluoride content of drinking water in Hong Kong in the past five years is as follows:

Period	Fluoride content of drinking water (mg/L)		
	Minimum	Maximum	Average
4/2014 - 9/2014	<0.1	0.64	0.48
4/2013 - 3/2014	0.15	0.69	0.48
4/2012 - 3/2013	<0.10	0.67	0.49
4/2011 - 3/2012	0.11	0.70	0.49
4/2010 - 3/2011	0.14	0.72	0.49
4/2009 - 3/2010	0.10	0.74	0.49

8. In drafting the Amendment Regulation, CFS has sought advice from the Dental Service under the Department of Health, which advised that there is no international recommendations for the maximum intake level of fluoride by infants. Nonetheless, most of the adolescents and children in Hong Kong do not have dental fluorosis. In regulating fluoride in infant formula, the Administration should also take the fluoride content of drinking water in Hong Kong into consideration.

9. The survey conducted by CFS in 2012 on the infant formula products on sale in the Hong Kong market does not cover the fluoride content of these products.

10. CFS does not have any information about the fluoride content of drinking water in other countries.

Question (6)

11. According to the Codex Alimentarius Commission (Codex), fluoride is not one of the 33 nutrients required to be present in infant formula. Fluoride can protect teeth. However, since an excessive intake of fluoride may increase the risk of dental fluorosis, we propose to regulate fluoride in infant formula. With reference to the practice of Australia and New Zealand, we require infant formula to be labelled with a statement associated with dental fluorosis, if the fluoride content of the product (in a form that is reconstituted or served according to any instructions for use provided) exceeds the maximum level stipulated in the corresponding Codex standard. The statement would:

- (a) indicate that consumption of the formula may cause dental fluorosis; and
- (b) recommend that the risk of dental fluorosis should be discussed with a medical practitioner or health professional.

12. In fact, the fluoride content of infant formula is not regulated in places such as Singapore, the United States and the Mainland China. We are of the view that the suggested regulatory control would strike a proper balance between providing sufficient information for parents to make an informed choice and international regulatory practice.

Yours sincerely,

( Jeff LEUNG )

for Secretary for Food and Health

## **Additional Information on Test Result on Nutritional Composition of 14 Infant Formulae Included in the Preliminary Study**

The Centre for Food Safety conducted further nutrient testing on selected infant formulae included in the preliminary study. Kindly note that information provided below supersedes related data found in the attached table on page 2-3.

### **Iodine Content in Infant Formulae**

**Updated on 10-8-2012**

<b>Product Name</b>	<b>Iodine Content based on Declared Energy Value (mcg/100kcal)</b>
Wakodo 和光堂初生嬰兒奶粉	1.7 <sup>#</sup>
Wakodo 和光堂初生嬰兒奶粉 (2 <sup>nd</sup> Batch)	2.1 <sup>#</sup>
Morinaga 森永初生嬰兒奶粉	3.9 <sup>#</sup>
Morinaga 森永初生嬰兒奶粉 (2 <sup>nd</sup> Batch)	3.9 <sup>#</sup>
Friso Gold Infant Formula 1	12.4
Gillbert Laboratories Physiolac Infant Milk 1	10.5

Remark:

<sup>#</sup> Risk assessment showed health concern.

**Updated on 16-8-2012**

<b>Product Name</b>	<b>Iodine Content based on Declared Energy Value (mcg/100kcal)</b>
Snow Brand Smart Baby 1 Infant Formula with Iron	10.0
Meiji 明治細仔奶粉 (明治初生嬰兒奶粉)	11.1

### **Biotin Content in Infant Formulae**

**Updated on 16-11-2012**

<b>Product Name</b>	<b>Biotin Content (mcg/100kcal)</b>
Meiji 明治細仔奶粉 (明治初生嬰兒奶粉)	0.81*
Wakodo 和光堂初生嬰兒奶粉	0.68*

Remark :

\* Below Codex Standard. Risk assessment showed that according to the feeding suggestion on the label, biotin intake will be lower than the recommended intake suggested by the World Health Organization (i.e. 5 ug per day).

## 在香港出售的嬰兒配方奶粉中驗出的碘含量 Tested Iodine Level in Infant Formulae Available in Hong Kong

28-12-2012 更新 (^ 新樣本或更新碘含量資料) Updated on 28-12-2012 (^ New sample or iodine content information updated)

1) 碘含量符合食品法典委員會標準 (每100千卡10至60微克或每100千焦2.5-14微克) 的嬰兒配方奶粉

註: 碘含量 (微克/100千卡) 是以嬰兒配方奶粉中驗出的碘值 (微克/每公斤) 及驗出或奶粉標籤上的能量值計算所得; \* 初步研究中驗出的碘含量 (微克/100千卡)

1) Infant formulae meeting the Codex requirement on iodine content (10-60 mcg/100kcal or 2.5-14 mcg/100kJ)

Note: Iodine content (mcg/100kcal) is calculated using the tested iodine level of the infant formula by weight (mcg per kg) and the energy value tested or declared on the label. \* Tested iodine content (mcg/100kcal) from preliminary study
