

DHL Aviation (Hong Kong) limited

Dear Michelle :

I am planning to attend the panel on July 14th to express DHL's Views however I may not be available to attend in person therefore I am sending our comments via e-mail which please note.

"DHL Aviation Hong Kong Limited welcome the Three-Runway System Environmental Impact Assessment ("EIA") covering 12 environmental aspects and we trust, according to the EIA, that all environmental concerns and potential impacts arising from the Three-Runway System will be mitigated, compensated or minimized. Further, we are pleased to know that the Airport Authority Hong Kong will spearhead a series of measures for improving the environment in particular in connection with air quality and aircraft noise, including but not limited to the mandatory uses of fixed ground power and pre-conditioned air systems by all airlines at frontal stands to reduce aircraft emissions; and the installation of 290 charging stations for electric vehicles and electric ground support equipment.

Without impeding the development of the airport, we support embarking on the construction as soon as practicable"

My contact details are listed below and I will be pleased to provide any further explanation should you require.

Sincerely

Tony Khan
