Dear Legco,

Please update my passage to the one enclosed below.

Thank you very much.

Best regards,  
Patrick

Dear Legislative Councilors,

Do not deny Hong Kong from what is needed to maintain the leading edge among the World. Hong Kong (HK) is a small dot of the world that holds over seven million individuals while also efficiently functions as the centralized hub for world trades, logistics, etc.. For HK to obtain the reputation it holds in the world, many infrastructure, sounded long term government policies, and complacency of the seven million individuals working in coherent with our strong and long term ideals are required.

The world has evolved much in the past two decades since the establishment of our current most efficiency Hong Kong International Airport (HKIA). Internet is accessible to almost every home locally, air flight world travel is now more affordable, air freight transport has gradually become the norm for supply chain management, and several airports have already been established around HK. With all these advancement, when the experts have concluded that HKIA needs expansion and the expansion is self-sufficiently paying for itself. To deny the further expansion of the HKIA is to deny ourselves from the riches that lie ahead.

While much opposition have already claimed that the further establishment of HK would create impact to our environment, please bear in mind that the original airport, that had taken us to flight to where we are today, was established in the central of Kowloon. Though construction works and enhanced air traffic could create certain impact, with the current technological advancement and the steadfast government supports, these impact can and will be kept to a minimal and will certainly be far less than what once was when the previous airport had us all up float into the world. The government could also provide incentive for the construction to offset the pollutions by establishing Green-Objectives in more accessible area in order to provide a better outcome for a greater good.

HK, to maintain the best and to build a better future, will need the best. Please do not deny HKIA from having the much needed third runway to facilitate HK from continually maintain its ability to work in harmony with our neighbouring cities in facing the global challenge.

Best regards,  
Law, Kwan Ping (Patrick)
