

(This is the English translation of an original braille submission.)

Runways or Dieways?

Hong Kong preaches diversity and practice insanity. Wouldn't it be too ridiculous to talk about "biodiversity" when developing against humanity? Even those notorious Fascists would not bury the reservoir when running out of land! But why could our president brutally suggest this? Does it mean we'll have more places for a house? Will we have a more efficient airport with solely one more runway? Have you forgotten anything about biodiversity?

To bury a dam is to face his condemn

Water means life; and burying a reservoir means no more water; therefore, burying a dam equals to murder! In spite of its fallacy, this is how your \$6.89-worth president do when crying out for land. Even dictators need water, and what makes him give up his life—as well as our lives—is yet to be clear.

Whales cannot fight wheels

It is our regret that no surviving Chinese white dolphin was found around the Lantau, prior to the construction of useless runway.

Regardless of nonsense from Taiwanese ex-prime minister (Dolphins can turn by themselves), it is no denial that the construction of Airport expansion not only jeopardise the biodiversity in Hong Kong, —whether in the sea or on the hills, —but also exhaust our public expenditure against social welfare, medical services, and anything worth investing for our lives.

Scrap our hills and smash yourself

The Lantau, the home for species in the world, is now facing the threat of development, in the name of "scarcity of land" by Wolf.

Admittedly, little effect of increase of the supply of housing can be seen through the development of Lantau. Instead, the excavating of hills on the Lantau Island could bring **irreversible** and adverse effect to the ecosystem of Whole Hong Kong territory, not as simple as the island itself. Brought are the polluted air, tainted drinking water, skyrocketing emission of CO₂, and even the extinction of rare species. This will be

followed by the deterioration of public health, the loss of Hong Kong's status on the "Belt and Road", and the downfall of Hong Kong due to climate change.

For the sustainable future generation of Hong Kong and our ecosystem, we urge the government DISCONTINUE any unreasonable projects of development, with measures safeguarding biodiversity of Hong Kong.
