**LEGISLATIVE COUNCIL  
PUBLIC WORKS SUBCOMMITTEE**

PWP Item No. B440RO — District open space adjoining  
public housing development at Anderson Road

Enquiry letter of Hon Jeremy TAM to the Chairman of  
Public Works Subcommittee on 18 May 2017 on the above item

The information requested by Hon Jeremy TAM is set out as follows -

**(a) Slip resistance requirement for floor tiles typically adopted in the outdoor open space**

In the selection of outdoor open space floor tiles, the major considerations include their anti-slip safety performance and durability etc. In addition, the contractor must provide an anti-slip test report and certification of floor tile related materials in accordance with the requirements as set out in the construction contract.

**(b) Whether slip resistance requirement for floor tiles has taken account of the degree of slippery of the floor**

Since most of the areas in the open spaces are not covered, in the selection of floor tiles, the requirement of anti-slip safety performance will be considered based on the impacts arising from different weather conditions.

**(c) Whether the floor tiles to be adopted in the district open space adjoining the public housing development at Anderson Road will follow the standard as adopted in Laguna Park**

We will adopt precast concrete and clay pavers as the floor tiles in the district open space adjoining public housing development at Anderson Road, which is different from the floor tiles as adopted in Laguna Park. In addition, the proposed precast concrete and clay pavers are commonly and widely used for paving public footpath.
