

March 2017

To Whom it may concern, including Government, Legislative Council and Media

We are all students of the Master of Public Health and PhD in Public Health (2017-2018) programme at the Chinese University of Hong Kong.

In the interests of public health for the people of Hong Kong, we support the increase in size of the graphic health warnings to 85%, as proposed by the Hong Kong government.

Hong Kong's warnings need updating, increasing in number, and upgrading from 10 years ago.
