CB(1)1845/98-99(02)

1. Review of LAC & USC is imminent, because:

→ Counting of LAC based on occupancy minutes is 20%-80% more than based on actual

billable minutes, making ETS operators pay extra LAC.

The average cost of LAC & USC per minute is HK\$0.25, which could represent more

than half of the revenue. It discourages the ETS operators from make any investment

and operation locally, even if they are already licensees.

For example: IDD to the USA HK\$0.38 (currently retail price available)

-) HK\$0.25 (LAC & USC)

HK\$0.15

This amount of HK\$0.15 has to cover the lease line charge, destination DDD expense, promotional and operational expenses. With deduction of all these costs from revenue, the business is totally non-profitable. At wholesale IDD business, the situation is even severe.

2. Rental of Local Telephone Line should be off-hook with the drop of CWHKT IDD

revenue, because

• The 6.7 billion compensation had paid to CWHKT for its release of monopoly

right

CWHKT still dominates local network penetration near 98%.

Local residents who do not use IDD service should not bear the increased rental

of Local Telephone Line.

3. Building Access should be opened to all FTNS

• Due to the scarcity of land, further expansion of cable ducts in most of the older

buildings is not possible. Therefore, enabling Type II interconnection is of high

importance.

• Realize and monitor 50% of local loop connection.

3

Request the property management to allow the FTNS access to the buildings. It'll

facilitate the infrastructures of Hong Kong and remove the monopoly on local

network. As a result, domestic and international services can be better provided to

the public.

Government should provide guideline and demands FTNS to provide services not

only to commercial customers, but to residential customers as well.

4. Anti-competitive price dumping

Listed companies and large corporations sell at below-cost prices to excel other small

and medium size ETS operators. If problem persists, Hong Kong people will lack

choices and prices will rise eventually. For example, current below-cost IDD rate to

USA is HK\$0.38/min.
